## EH Miniature Lighted Pushbutton Switch EH-Gseries +FLAT

The EH series, with its proven reliability, now includes a long-awaited unit with the flat configuration.

## FEATURE

## The flat configuration with its sophisticated design is now included in the lineup of the EH series, which has withstood the test of time and which is highly regarded for its reliability. With its enhanced visual appeal, the unit with the flat configuration expands the scope of application even further.

## -Design-oriented

- The objective of the development was to create a switch with a graceful design.
- A sophisticated switch with enhanced visual appeal was created in the quest to achieve a small, flat profile and an easy-to-operate button size.

## - Reliability-oriented

- The EH-switch mechanism, which has withstood the test of time, was adopted for its reliability and long lifespan.
- Superior contact reliability was obtained by improving the dust resistance.
- The supply system is dependable because it is made domestically.

## - Functionality-oriented

- The flat profile is the optimum configuration for preventing operation errors.
- It helps to reduce space because the body is just 25.3 mm long and the depth behind the panel is only 22.5 mm .
- The unit helps to reduce costs because it is an all-in-one product incorporating the main body and switch part, thereby reducing the assembly work.
- A unit that uses connectors instead of wiring is available.

## - Applications

- Chip-manufacturing equipment, machine tools, communication devices, monitors and control equipment, broadcasting equipment, etc.

Easy-to-attach thanks to its short body

Its flat profile enhances the sophisticated appeal of the panel.

## SPECIFICATIONS

| Contact | Silver Contact (Gold-Plated) | W/E Alloy \#1 Cross-bar Contact |
| :---: | :---: | :---: |
| Electrical Rating | AC125V, 250V 3A(Resistive) | AC125V 0.1A, DC30V 0.1A(Resistive) |
| Electrical Life | More than 60,000 operations at max. rated load | More than 100,000 operations at max. rated load |
| Insulation Resistance | More than $100 \mathrm{M} \Omega$ at 500 V DC |  |
| Dielectric Strength | 1000V AC RMS between NC and NO terminal 1500V AC RMS between terminals and ground $50 / 60 \mathrm{~Hz}$ for 60 sec. at normal ambient temperature and humidity | 600V AC RMS between NC and NO terminal 1500V AC RMS between terminals and ground $50 / 60 \mathrm{~Hz}$ for 60 sec. at normal ambient temperature and humidity |
| Contact Resistance | Less than $30 \mathrm{~m} \Omega$ (Initial) at DC6V 1A | Less than $50 \mathrm{~m} \Omega$ (Initial) at DC6V 0.1A |
| Vibration | Frequency of vibration 10 to 55 Hz , Amplitude 1.5 mm (operating limit) |  |
| Shock resistance | 30G (operating limit), 50G (sustained) |  |
| Mechanical Life | Momentary Action : more than 2,000,000 operations Alternate Action : more than 200,000 operations |  |
| Ambient Temperature | $-15^{\circ} \mathrm{C}$ to $+50^{\circ} \mathrm{C}$ |  |
| Ambient Humidity | 80\% RH (max.) |  |

DC Rated (Silver Contact)

| Rated <br> Voltage <br> (V) | Registance Load | Electrical <br> Life |
| ---: | :---: | :---: |
| DC 8 | 3 | More than <br> 100,000 <br> operations |
| 30 | 3 |  |

OPERATING CHARACTERISTICS

| Operating Force (max.) | 4.41 N | Total Travel (max.) | 3 mm |
| :--- | :--- | :--- | :--- |

## DIMENSIONS

$\psi$ The depth of the flat button is different from that of a standard button.

Tolerance : $\pm 0.4 \mathrm{~mm}$

## INTERNAL CONNECTION ARRANGEMENTS

- LED (Red,Green,Yellow)

- Combination of dual-color LEDs (common to all voltages)

| LC-L1 | Red | Green | Yellow |
| :---: | :---: | :---: | :---: |
| LC-L2 | Green | Yellow | Red |

* Units with common cathodes (-) are also available. Please feel free to contact us.

## TERMINALS

| $24( \pm 5 \%)$ | 9 |  |  | 8 |  |

## - EXTERNAL RESISTOR

Switches are normally fitted with internal resistors to operate on $5,12,24 \mathrm{~V}$ DC supply. In case of non-resistor type, suitable external current limiting resistors must be installed as shown by the table and formula.

## Panel Layout/Panel Cut Dimensions

- 17mm Square / 20.2mm Round
( Panel Layout
When an exterior finish, such as coating, is applied to a cut panel, please ensure that the dimensions after the finishing

## ACCESSORIES

## Sockets

Convenient sockets that reduce the labor in terms of assembly, wiring and mainte-
nance are available in both the square and round configurations.

- For soldering tab terminal (unit without resistance and unit with built-in resistance)

Mono-Color

Dual-Color

PART No.

| Application | Resistance | Part No. |  |
| :--- | :--- | :--- | :--- |

## ASSEMBLY \& DISASSEMBLY

Removing the illuminating parts

Pull out the part by inserting one's fingernails in the recesses on both sides of the button.

- Attaching the illuminating parts

Adjust the guide part on the button to the window part on the body case and push it inside until it reaches the operating limit and clicks.

Be sure to use the extraction tool (SJ-0009) to remove the square flat unit.

Adjust the guide part on the button to the window part on the body case and push it inside until it reaches the operating limit and clicks.

Use the extraction tool (SJ-0002-1) to remove the round flat unit.

* In the case of the alternate unit, remove the lock before pulling it out.

## - Screw tightening jig

Use this jig to attach the body of the round unit to the panel. It improves operability and makes it possible to tighten the screws so they don't rattle. Type name: EH-4195

## Unit with connector

A unit with a connector that saves bothersome soldering work is also available.
The unit with connector is already equipped with a substrate and housing in its terminal in the main
Reduce wiring body. A connector and six pins are attached. Alternatively, you can choose to purchase a wire harness, which is available separately.

## Precautions when specifying the type

* Since the unit with a connector is available only as a single pole, please choose 3 or 5 for the circuit number code and contact material for the type specification. Enter K for the code for the terminal shape.

## ORDERING CODE

## - Precautions

*1) In the case of a full-face, dual-color LED consisting of three pieces, we recommend that you use a transparent button and a milky white filter. When it is made of a single piece, we recommend using a milky white button.
*2) In the case of a unit with built-in resistance, a full-face and dual-color LED, it is impossible to illuminate the two colors at the same time in the case of all voltages including $5 \mathrm{~V}, 12 \mathrm{~V}$ and 24 V .
To illuminate the two colors at the same time, it is necessary to choose usage voltage code, 4,5 or 6 .
*3) If you do not require a button, please order the illuminating parts and main body separately.
*4) Flat Indicator button level is Flat.(locked position) Therefore, Flat Indicator cannot be selected button shape code (F0, Y0, F3, Y3). Please specify (LO, RO, L3, R3).

## When ordering a unit with dual-color illumination:

Dual-color illumination
In the case of a unit with built-in resistance, it is impossible to illuminate the two colors at the same time in the case of all voltages, including $5 \mathrm{~V}, 12 \mathrm{~V}$ and 24 V . To illuminate the two colors at the same time, it is necessary to choose usage voltage code, 4,5 or 6 and to connect the series as follows. Code 4:36, $1 / 4 \mathrm{~W}$; code 5: 270, 1/4W; code 6: 1.1k, 1/2W. Alternatively, use EH-3210-2C (for socket 5V), EH-3210-2D (for 12V) and EH-3210-2E (for 24V).

* Since the dual-color non registor type has different circuits for the $5 \mathrm{~V}, 12 \mathrm{~V}$ and 24 V , please indicate that the unit is one without resistance, in addition to specifying the usage voltage code of 4,5 or 6 .
* Even after following the above instructions, the two colors may not illuminate at the same time. However, there should be no problem if the failure lasts for only a short time (two to three minutes).

## PRECAUTIONS

1. Solder the terminal at $380^{\circ} \mathrm{C}$ within three seconds. Please do not touch the switch with a soldering iron as it may deform the terminal part and cause a malfunction.
2. Please do not move the terminal part while soldering or within one minute after soldering is complete.
3. Check the rated voltage indicated on the side of the illuminating part.
4. Character films are not included. When using a character film, please use a heat resistant film 0.1 mm thick or less. For the dimensions, please refer to the table on the right.
5. Please use a torque of $1.0 \mathrm{~N} . \mathrm{m}$ or less when tightening the screws to attach the panel.

* For precautions other than the above, please see pages 30 to 34 in the general catalogue.
